

Griffin Gear is pleased to announce successful completion of the Timken “Bearing Certified Maintenance Program.”

Griffin Gear pursued this designation to prove that we adhere to the highest standards in bearing service. We believe this certification will help Griffin Gear stand out as a facility that has a solid process and the appropriate equipment to ensure proper bearing maintenance.

Receiving the certification is an on-going process that includes:

- ✿ A rigorous pre-audit of our facility to document the quality of the processes and equipment in place to store, remove, install and maintain bearings conducted by a Timken engineer.
- ✿ On-site training of Griffin Gear’s employees by Timken.
- ✿ A post-training follow-up audit where recommended improvements were approved and implemented.
- ✿ On-going, unannounced Timken audits to ensure sustained quality, standards and continuous improvement.

We will proudly display our banners as Timken Certified to show our employees and visitors that our gear reducer rebuild meets some of the highest standards in the industry for bearing maintenance. If you would like to schedule a tour of our facility, please give us a call!
